Green Lights Recycling Re-Awarded Minnesota State Contract

Blaine, MN

Green Lights Recycling, Inc today announced it has been re-awarded the State of Minnesota contract for recycling services. The contract award includes recycling services for all types of fluorescent and high intensity discharge (HID) lamps, lighting ballasts, mercury and mercury containing devices.

John Crudo, President of Green Lights Recycling commented that the evaluation process used by the state is extremely rigorous and very detail oriented. "We are pleased that the decision process is so detail oriented. It affirms our philosophy of taking extra steps to protect our customers from potential long-term liability associated with cradle-to-grave waste disposal."

Green Lights Recycling has been an authorized State of Minnesota Contract Vendor since 2003. This most recent contract award has a three year duration and will help State Contract Users until 2013 with an option to extend the contract.

Additionally, the contract provides for municipalities, cities, counties and other political sub-divisions to host recycling collections events for residents to bring their household hazardous waste materials to a central collection site for proper recycling. Green Lights Recycling is a Minnesota Company and has extensive experience in hosting such events statewide and nationally.

We invite anyone who is interested in knowing more about the company to contact us directly. Call, click or visit Green Lights Recycling today.
